01 / BUSINESS & CAPABILITIES

Quality in every detail.
From sample to scale.

PT Bedel General Enterprise is building a garment manufacturing operation in Bogor, Indonesia around disciplined workmanship, clear production standards and consistent quality control. We focus on how a garment fits, feels, is constructed and is finished so buyers have a clear standard to approve and repeat.

Children's clothing is our initial focus, with a broader B2B direction in uniforms, workwear and repeat garment production.

01 Children's clothing

Everyday clothing and occasionwear, including shirts, separates, dresses and modestwear. Development gives close attention to comfort, fit, age-based sizing and neat finishing.

02 Uniforms & workwear

Projects for hospitality, restaurants, teams and facilities. Fabric, construction and branding are reviewed for the intended use, comfort and presentation.

03 Repeat garment production

Private-label projects, size and colour runs, and planned reorders. The approved sample and recorded specifications provide a consistent production reference.

Project feasibility, minimum quantities, materials and lead times are confirmed after brief review. Technical or protective workwear requires a separate specification review.

02 / OUR QUALITY COMMITMENT

Workmanship matters.
Standards guide the work.

Our commitment is to build quality into development, cutting, sewing and finishing. Each order is guided by an approved reference, agreed criteria and clear responsibility for identifying and resolving issues.

01 **Materials suited to the garment**

We agree fabric feel, weight, colour and trims for the intended use, and check materials against the approved reference before production.

02 **Fit and measurement accuracy**

We review the sewn sample and size measurements, and record agreed tolerances to guide consistent fit and sizing across the order.

03 **Careful stitching and construction**

We follow the agreed seam and stitch requirements, checking alignment, joins and fastening attachment for neat, secure garment construction.

04 **Finishing and presentation**

We give attention to hems, thread trimming, pressing, labels and branding placement so the finished garment reflects the approved sample.

05 **Checks throughout production**

We check work during cutting, sewing and finishing, as well as at final inspection. Issues are raised early and resolved against the agreed criteria.

06 **Correction, rechecking and release**

Identified defects are corrected and affected pieces rechecked before release. Sizes, quantities, labelling and packing are checked against the order brief.

03 / THE PRODUCTION JOURNEY

Clear approvals.
Controlled production.

Quality starts with a clear brief and an approved sample. Each stage carries the agreed standard forward, with questions and findings addressed before the next step.

01 Brief & development

Define garment use, quantities, materials and the required level of workmanship.

Buyer checkpoint: Confirm the brief and quality expectations.

02 Pattern & sample

Review fit, measurements, comfort, construction and finishing on the sewn sample.

Buyer checkpoint: Agree adjustments before approving the reference.

03 Approval & planning

Record approved materials, measurements, tolerances, trims and inspection criteria.

Buyer checkpoint: Approve the sample, specification and order terms.

04 Cutting & sewing

Follow the approved reference; check work as it progresses and raise issues early.

Buyer checkpoint: Resolve changes before they affect the wider batch.

05 Inspection & correction

Check measurements, construction and finish; correct and recheck identified defects.

Buyer checkpoint: Address findings against the agreed criteria.

06 Packing & repeat

Confirm sizes, quantities, labels and packing. Retain the reference for future orders.

Buyer checkpoint: Confirm handover and the specification for reorders.

04 / WORKING WITH BEDEL

Your standards.
Our attention to detail.

A production partner should understand the details that matter to your business and carry them through the work. Our approach centres on clear expectations, careful execution and accountability when something needs attention.

Development with purpose

Resolve fit, comfort and construction while the garment is still a sample. Align materials and finishing with the intended wearer and use.

Accountability for quality

Give sewing and QC teams a clear reference and agreed acceptance criteria. Encourage early problem reporting, correction and rechecking throughout the work.

Consistency for repeat orders

Retain approved measurements, materials, trims, branding and finishing details. Review any proposed change with the buyer before the next production run.

Start a production inquiry

Share your garment type and use, quantity, size breakdown, fabric preferences, branding, target schedule and quality requirements. Include any references, patterns, tech pack or approved sample.

Submit your brief online ptbedel.com

Pricing, minimum quantities, lead times, shipping arrangements and commercial terms are agreed per project. An inquiry begins a discussion; it is not a production booking.
